ТВОРЧЕСКОЕ ЗАДАНИЕ

Some scientists think there are intelligent life forms on other planets and messages should be sent to contact them. To what extent do you think it should be done? Write an essay to argue your point. Write between 200-220 words.

Many scientists believe in existence of intelligent life forms in other galaxies, so they send signals to contact them. While some people think that it should be done at all cost and we have to do everything possible to get a sign from the outside, it is still my belief that these messages should not be sent at all.

First of all, the researches require an enormous amount of money to be carried out, as well at this point, scientist have to create powerful equipment which is obviously very expensive, as well as pay for the electricity.

Furthermore, waiting for the response from another universe consumes a lot of time. The studies have shown that it would take approximately a century to receive a signal from the nearest universe.

Finally, there are still many ~~ten~~ serious problems on ~~our~~ our planet that have to be immediately ~~solved~~ ^{in the first place} in the first place. For instance, ~~ra~~ some people and animals already suffer from the climate change, excessive carbon emissions, etc. For this reason, it is vital for the humanity to pay ~~spend~~ more attention on the Earth rather than the other planets.

To sum up, ~~getting a message from the space~~ making the attempts to contact intelligent life forms ~~have~~ ^{major} has ~~more~~ downsides nowadays. To my mind, ~~we have~~ it is essential to solve our local problems ~~in the~~ firstly, so we would have everything required to explore the space later.
