ТВОРЧЕСКОЕ ЗАДАНИЕ

Scientists from ~~all~~ around the world have spent many years trying to find intelligent forms of life on other planets yet we still have no evidence of their existence. Some argue that, given our situation, there is no point in sending signals to contact them. ~~and~~ I am of the same opinion, even though I believe that intelligent life forms might exist somewhere in the universe.

Firstly, spending time, money and resources on sending these signals ~~into~~ ^{into} space seems meaningless if we look at the stage of space exploration the humanity is on at the moment. I think that we need to thoroughly explore the galaxies that are available to us and ~~and~~ then, if we have proof of the existence of intelligent forms of life ^{there}, try and contact these forms.

Secondly, we need to find new ways of sharing ^{and coding} information. Creatures from other planets might be able to receive the information but not understand it. In my view, scientists should ~~look into different~~ conduct more research in the field of linguistics to make the information more comprehensible for a variety of living creatures.

In conclusion, I believe that sending

messages to contact life on other planets
should ~~be~~ not be our main focus and
this activity should be ^{done to a} very limited
extend or not done at all. Researchers
should get more information about
the universe before trying to contact
^{other} life forms.
