ТВОРЧЕСКОЕ ЗАДАНИЕ

Nowadays there are many questionable opinions on the topic of life on other planets. Some scientists think that we should send messages to contact people on the other planets.

In my opinion, if we do not do it, we will never know that there are intelligent life forms on other planets. It will be a great development for the Earth. After that we will have an opportunity to fly to another planets and, maybe, live there in the future.

Our galaxy is not as complex as the majority of people think. It is a collection of atoms. Our planet is the most valuable planet among all other planets in different galaxies. Although we have global problems that can arise in the future. Demography problem is one of them. Each day a lot of people birth but lands on the Earth are not growing. That is why in the next 100 years it will be hard to live in countries which can't provide land and food for their people. Scientists should must get over this problem in case people die.

All in all, we should take a chance to send messages to another planets. Maybe, some day we will be lucky in this question and we will help other people live longer and happier.
