5	Marine creatures can easily navigate in the sea using their inherent sense of electric and magnetic fields. Humanity haven't settled on the version explaining that behaviour and haven't learned to use it for its own good yet, but further scientific research can allow people to improve our technology (in many fields) significantly.

20	<p>Everyone at the UN's annual climate summit have pledged to raise global renewable-energy capacity. However, the industry nowadays is under strain. Principal problems include slow approval, protectionism, funding issues. It also highly affects global south. Rather than micromanaging production, governments should unleash investment and make formal rules less restrictive, especially when it comes to helping global south.</p>
