ТВОРЧЕСКОЕ ЗАДАНИЕ

Lately many people have been expressing their concerns about Chat GPT. Many think that such a system may lead to the downfall of education and critical thinking. This opinion has its fair share of supporters, ironically, mostly on the internet. I, however, think of this concern as a terrible exaggeration which, if becomes widespread, may hinder humanity's technological progress.

Most supporters of this idea of Chat GPT being a horrible tool that makes students lazy is, of course, the older generations, who are not big fans of educating themselves on modern technology and other relevant topics. This is not to say that Chat GPT is without its disadvantages, especially regarding the education process. However, in my honest opinion, it would be much more productive to integrate different AI tools in the process of studying instead of rejecting them.

As an example of this theory being an exaggeration, we need to remember that the internet has been widely available for twenty years, and with its access to the massive amounts of information that Chat GPT itself uses. Smartphones became easily accessible almost fifteen years ago. Did those things lead to the downfall of education? I certainly do not think so. Chat GPT uses already publically available knowledge accessible from any student's smartphone, so I do not believe that Chat GPT can ruin the education system in any way.

After everything said, I want to empathise that I do not find Chat GPT or any other AI technology completely harmless. The new wave of AI hysteria showed itself to be very dangerous to industries like art or filmmaking. However, this also shows us the world's need to adapt to new technology, instead of rejecting it.
