ТВОРЧЕСКОЕ ЗАДАНИЕ

To what extent can artificial intelligence hinder the development of our race and can it really? There is much ground to cover, but let us look at the simpler examples.

For many online bots have become a reliable tool and assistant in their daily lives. For instance, Chat GPT is used by many students but not in the way many view it. Such programmes can put a person on the right track if they are struggling to either begin or finish assigned tasks. That is but one example of AI, short for artificial intelligence, being used for its intended purpose. By no means does an appliance take over the role of a student in the educational field. There is much burden placed on the younger generation due to the evergrowing demand of exceptional and professional workers fit for a certain job, so AI can make that path easier to tread.

It is important to discern handy tools from outright replacements of people and humanity as a whole. Although helpful, AI lacks many ~~features~~ skills of our own, despite its incredible abilities. AI cannot ponder over one thought and find answers to philosophical questions, it is not capable of delving deep into the intricacies of human thinking. It is but a tool crafted by us.

In conclusion, I disagree with the concept of AI being the downfall of the educational system. It is one of our many creations designed to aid us, not replace.
