ChatGPT and AI technology has seen drastic improvement in the past few years. It has gone from barely being able to form coherent sentences, to being able to write entire essays, though still not always sensible. With its rise, the ability to go undetected also increased, allowing for students to take advantage of this technology and use it to cheat. Due to this, many of those who are lazy or lacking in knowledge lose the ability to think critically and ~~use~~ slowly, what they have learnt.

As an example of this, many students currently use ChatGPT to write essays and most of them get away with it. Doing so, while not gaining new information and not using their own skills perfecting their own skills ~~there~~ through experience. Also, they ~~use~~ use AI to do similar work in that to get into schools and institutions. Not gaining ^{any} qualifications for their future job, which could endanger people. ~~Although~~ Though, None the less, AI is also useful in a professional environment. Those with critical thinking ~~skills~~, experience and knowledge can use it to lighten their workload, or help even more people than they could before.

All in all, ChatGPT and AI are helpful tools, which will not lead to education's downfall. Negatively, it will affect those already not willing to learn and further their own careers.
