ТВОРЧЕСКОЕ ЗАДАНИЕ (лист 1)

ВАРИАНТ № 3

Nowadays it seems like AI is everywhere, and that's because it really is! Most modern companies have jumped onto the AI bandwagon and integrated it ~~everywhere~~ wherever they could. The infamous terrible Google AI summaries are just one of many examples. But why does that happen?

Artificial Intelligence is a huge leap in progress, and I'm not just talking about Chat-GPT and Dall-E. Although, those are what people commonly think of when you mention AI, it's actually ~~a~~ one of the many types, called generative AI (it generates stuff, hence the name). The main purpose of AI, where it really shines, is analyzing enormous amounts of data. Recent developments allow us to create many tools ~~in~~ for all kinds of ^{tasks} jobs. Let's take medicine for example: AI trained on countless scans can accurately detect cancer in its earliest stages.

So, why is AI popular? It's really something to be expected. It's the new "thing", like the Internet was not too long ago. Just a decade back, the tools we have at our disposal were in the science-fiction territory. It's new, accessible and fun. Big corporations used it to make a quick buck and the people loved it. My stance is: we just have to get used to it. AI isn't going to disappear and (hopefully) isn't going to take over the world. I just hope that AI does chores while ~~we~~ humans do art, not reverse.

Both of them are unable to marry the person they love due to different circumstances. They share two common factors: a failed marriage and the ownership of the house.	45.
