5	<p>The biggest benefit of computer-based learning compared to traditional education is that in this way, young people get not only knowledge, but also some practical skills. They learn to search information and analyse it correctly. The computer-based learning teaches them to work with modern technologies, which is vital nowadays. The future is also on computers, and this way of learning makes people familiar with <del>it</del> computers and able to develop it in the future.</p>

16	<p>1. F „the lack of substantial measures from global leaders!“          2. T „Terms like „climate anxiety“ can validate these feelings, but they risk framing individual distress as the problem rather than acknowledging our connection to planetary crises.“          3. F „What has happened to you?“ instead of „What is wrong with you?“          4. T „Social power dynamics also influence whether individuals feel heard...“          5. T „Addressing climate distress requires systemic changes from governments.“</p>
17	<p>1. Severe floods, hurricanes and heat waves are visible effects of climate change. 2. 45% of 10,000 young people suffer daily disruptions due to climate concerns, and ~3% fear for the future while 48% feel unheard. 3. It revealed common emotions, all valid reactions to the situation's gravity and societal dismissal. 4. PTMF helps identify how distress responses can serve different purposes, and find healthy ways to cope. 5. Community can help an individual in reducing climate distress by connecting with like-minded people. It's creating spaces to process emotions, so it's essential.</p>
