16	1. That's true because 2. That's true because it's written ^{not} written: "the Landauer limit, the minimal energy required for a single computational task". 3. That's false because it's primarily due to heat management. 4. That's true 5. That's false ^{true} because "neuromorphic computing aims to replicate the brain's is interconnected architecture".
17	1. Modern computers are really fast with billions of tiny transistors performing millions of operations per second. 2. Parallel processing is used in AI with thousands of graphic processing units running simultaneously ^{simultaneously}. 3. These are tiny machines, power thread-like molecules through nanofabricated mazes, solving problems with multiple solutions using far less energy than electronic processors. 4. They are slower, but they are require much less energy. 5. The brain uses only a few watts, significantly significantly less than AI, for various operations.
18	1. to remain having an actual situation ^{situation} 2. there's a tricky thing 3. good management 4. the amount of energy, which was cut on down. 6. to open new doors, to find new ways.
