ТЕСТ. БЛОК 2.

9 класс

Вариант № 3

16	1. True. "Computers and data centres consume about 3% of global electricity." 2. True. "Landauer limit, the minimal energy required for a single task." 3. false. "...tasks could be dispersed among numerous 'tortoise' processors working slower..." 4. False. "Currently, biocomputing is in the experimental stage." 5. True. "Neuromorphic computing aims to replicate the brain's."
17	1. They can perform millions of operations per second 2. It manages heat with AI that runs GPUs 3. They are solving problems with reduced energy demands. 4. They are slow but require less energy. 5. It uses only a few watts, significantly less than AI.
18	
19	1. a miracle 2. divided (between) 3. planning 4. improving 5. ?
20	Modern computers are fast but they require a lot of energy. Landauer limit and massively parallel processing were introduced to help by saving energy. Now there are a lot of new technologies like AI, biocomputers and neuromorphic computing. They need much less energy for their work.
