| 5 | Poor quality sleep is a crime against our bodies, and people nowadays barely get any rest. Insufficient sleep <del>has become a</del> may even start being identified as a public-health crisis, as it <del>can</del> is <del>even</del> the key factor in the development of many diseases, such as Alzheimer's disease, strokes, cancers, heart failure and even depression, leading to suicide, <del>that</del> significantly shortening one's lifespan, as Dr. Matt Walker puts it, "The shorter you sleep, the shorter your lifespan is". |

| 16 | <p>1. True. As AI usage grows, so does energy demand.</p> <p>2. True. <del>As this amount</del> In 1961 IBM scientist Rolf Landauer introduced the Landauer limit, the minimal energy required for a single computational task.</p> <p>3. False. It's cited due to heat management, not energy efficiency.</p> <p>4. False. Currently, biocomputing is in the experimental stage.</p> <p>5. True. Neuromorphic computing aims to replicate the brain's interconnected architecture using novel hardware. Comparing this to the Landauer limit might reveal new avenues for energy efficient computing.</p> |
| 17 | <p>1. Modern computers are very quick when it comes to performing tasks <sup>in millions of operations per second</sup> with their billions of tiny transistors.</p> <p>2. Parallel processing is used in AI with thousands of graphics processing units running at the same time.</p> <p>3. They power thread-like molecules through nanofabricated mazes.</p> <p>4. Biocomputers excel at combinatorial tasks, require less energy, though they are slower than traditional transistors.</p> <p>5. The brain uses only a few watts, significantly less than AI for various operations.</p>               |
| 18 | <p>1. To keep going at the same pace</p> <p>2. Something many people would not pay attention to</p> <p>3. producing less heat</p> <p>4. needing less energy to perform certain operations</p> <p>5. to create new opportunities</p>                                                                                                                                                                                                                                                                                                                                                                        |
| 19 | <p>1. A wonder</p> <p>2. to divide</p> <p>3. making it more</p> <p>4. <del>to make it more accessible</del> popularise</p> <p>5. a view</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
